

Case Study

Stone Wall Cavity Wall Insulation

The Client: Homeowner in Fence, Burnley

The Problem:

A part stone built home suffering excessive heat loss, high heating bills, wind driven rain penetration and consequent wall tie corrosion. The owner had been incorrectly advised by a previous Cavity Wall Insulation surveyor that stone built houses were unsuitable for cavity

wall insulation. He had also been told that it would cost £2,800 for wall tie replacement for only three walls which would have had a negative impact on the appearance of his property.

The Solution

Technitherm® Cavity Wall Insulation was recommended after a full survey by a trained surveyor. Technitherm will insulate the cavities of stone built houses and at the same time provide resistance to wind driven rain penetration, It also provides structural strength to walls. Technitherm is a market leading insulation with a 25 year proven track record. It is the only BBA approved cavity wall insulation and stabilisation system that carries an insurance backed 25 year guarantee.

The Outcome: - Continued overleaf...

Case Study

Stone Wall Cavity Wall Insulation

The Outcome:

The Homeowner said, "Technitherm has made a real difference to our energy bills. I've saved over £300 in the first year and I will save over £7500 over the next 25 years. Not only that but the cost of Technitherm was less than the cost of wall tie replacement and Technitherm has future proofed my house against wind driven rain penetration. The installation was very fast and was done from the outside with minimum disturbance. Due to the small drill diameter that was used, the external stone appearance has remained the same, our house feels much cosier during the cold winter months and we have noticed a reduction in external noise.

What does it involve?

Aran Services is an approved BBA installer. We take care of the entire process which involves carrying out a survey to confirm whether your property qualifies and is suitable for home insulation. We will then book an installation slot. The installation will be completed within 1 day. All installations are covered by an insurance backed guarantee.
